Breaking News (Jan 4th, 2017)

And this ISN'T FAKE

One Japanese insurance company, Fukoku Mutual Life Insurance, is reportedly replacing 34 human insurance claim workers with "IBM Watson Explorer," starting by January 2017.

The AI will scan hospital records and other documents to determine insurance payouts, according to a [company press release](#), factoring injuries, patient medical histories, and procedures administered. Automation of these research and data gathering tasks will help the remaining human workers process the final payout faster, the release says.

Fukoku Mutual will spend \$1.7 million (200 million yen) to install the AI system, and \$128,000 per year for maintenance, according to Japan's The Mainichi. The company saves roughly \$1.1 million per year on employee salaries by using the IBM software, meaning it hopes to see a return on the investment in less than two years.

Imagine this Scenario

1. An internet-connected sensor device on a construction site detects a critical support just shifted unexpectedly
2. The PM gets an alert that something is wrong
3. Using their smartphone they either create a new task using text / voice chat
4. The site foreman receives notification of this task and uses a mobile app to take a picture of a damaged support beam. The foreman adds the photo to the task and updates it with new information.
5. Looking at the updated task, the PM understands the issue and can take the appropriate action
6. Meanwhile, all this gets logged in the project management database: the alert, the task, the foreman's follow up, and a picture of the situation.
7. The project manager can use this to decide what needs to be done next.
8. Later, when the project manager is planning their next project, a machine learning algorithm alerts them to where a similar issue is likely to arise in the new project, enabling the project manager to proactively address the issue.

What do these jobs have in common?

Chief Listening Officer

Uber Driver

Driverless Car Engineer

Elder Care Services Coordinator

Drone Operators

YouTube Content Creators

Sustainability Manager

Online Community Manager

Telework Manager / Coordinator

Millennial Generational Expert

Cloud Computing Specialist

Big Data Analyst / Scientist

Answer

None of these jobs existed 10 years ago

The Reality of “Jobs of the Future”

They are forming
RIGHT NOW

How do you get
there?

This is about
**THINKING
DIFFERENTLY**

The “Jobs of Future” - In Depth Analysis

Identify / Assess the Opportunity

The Technology

“Investment”

What it Enables

Your Career Curriculum

Potential Skill Sets

Job Opportunities

Start Learning

NOTE: Following Examples are a taste of what is coming

Evolving Technology- Cloud

AWS– 11 Years ago (2006)

What it Enables

Compute on Demand (Commoditization of the Data Center)

"Investment"
Gartner - \$55 Billion IaaS Revenue by 2020
AWS – \$2.9B Revenue
1M+ Active Customers
AWS - 1,000 New Functions in 2016

Skill Sets
Creativity
Problem Solving
Experimentation
Cloud ROI

Job Opportunities
Migration Specialists
Cloud Architects
Cloud Native Developers
Program Management
Project Management

Where to Start Learning

AWS Free Tier (1 Year)

Evolving Technology - Drones

DJI – 11 Years Ago (2006)

What it Enables

Aerial access to any location

“Investment”

FAA Sales Estimate
7M Unit Sales by 2020

University of Missouri
Journalism (Reporting Course)

Amazon Drone Delivery

Google / Facebook
Internet Drones

Skill Sets

Creativity

Experimentation

Problem Solving

Data Collection / Analysis

Aviation Skills

Video Skills

Job Opportunities

Construction

Real Estate

Agriculture

Jail / Event Security

Package Delivery

News Reporting

Safety / First Aid

Where to Start Learning

Buy a Drone (\$100-\$1,000)

Evolving Technology - BlockChain

Bitcoin – 8 Years ago (2009)

BLOCKCHAIN

What it Enables

Trade anything with anyone around the world without dealing with an intermediary

"Investment"
R3 Company – Corda Project (70 Financial Institutions)
PwC – est 1.4 Billion invested in 2016
UBS / Deutsche Bank Santander / BNY Mellon (Industry Std to Clear/Settle Trades)
HyperLedger Project
Ethereum Project

Skill Sets
Encryption
Identity Protection
Problem Solving
Creativity

Job Opportunities
DISRUPTION
Business Process Redesign
Developers
Application Architects

Where to Start Learning

Join either the HyperLedger or Ethereum Projects

Evolving Technology - Artificial Intelligence

IBM Watson – 6 Years Ago (2011)

What it Enables

Machines that answer questions by processing vast amounts of data

"Investment"	Skill Sets	Job Opportunities
Amazon AI	Creativity	AI Governance / Legal
Microsoft Cortana	Problem Solving	AI "Testing"
Google Now	Experimentation	AI Enabled Management
IBM / Sloan Kettering	Data Collection	
Samsung VIV Acquisition	"Business" Logic	

Where to Start Learning

Amazon Echo / Google Home (\$50-\$200)

Evolving Technology – Internet Of Things SmartThings – Years Ago (2012)

What it Enables

The ability to connect / exchange data across disparate devices

“Investment”
50 Billion Connected Devices
\$450 Billion in Sales by 2020
http://www.postscapes.com/internet-of-things-investment/

Skill Sets
Hardware Design
Machine Learning
Security
Big Data
Experimentation

Job Opportunities
IoT Security
IoT Planners / Installers (Cities / Agriculture)
Data Stewards
Product Designers

Where to Start Learning

Purchase an IoT Hub
Explore IFTTT.COM
Explore www.postscapes.com

So many more change agents exist ..

Autonomous Vehicles

Virtual / Augmented Reality

Alternative Energy

Robotics

Gene Editing

Its all about perspective

**Are YOU Ready
for the “Job of the Future”?**

**Introducing
The “10 Steps” to Keep Pace**

Step #1

ANYTHING that CAN be Disrupted
WILL BE DISRUPTED

Step #2

You can be become technically “old”
VERY QUICKLY

Step #3

Move with the Market

Step #4

Vision First

Step #5

You are
more than a
tool

Step #6

Lose the Religion

Step #7

Embrace the inevitable

Step #8

**Leverage the Strength
Exploit the Weakness**

Step #9

**Experimentation
is the new normal**

Step #10

There is no free lunch

The 10 Steps Summarized

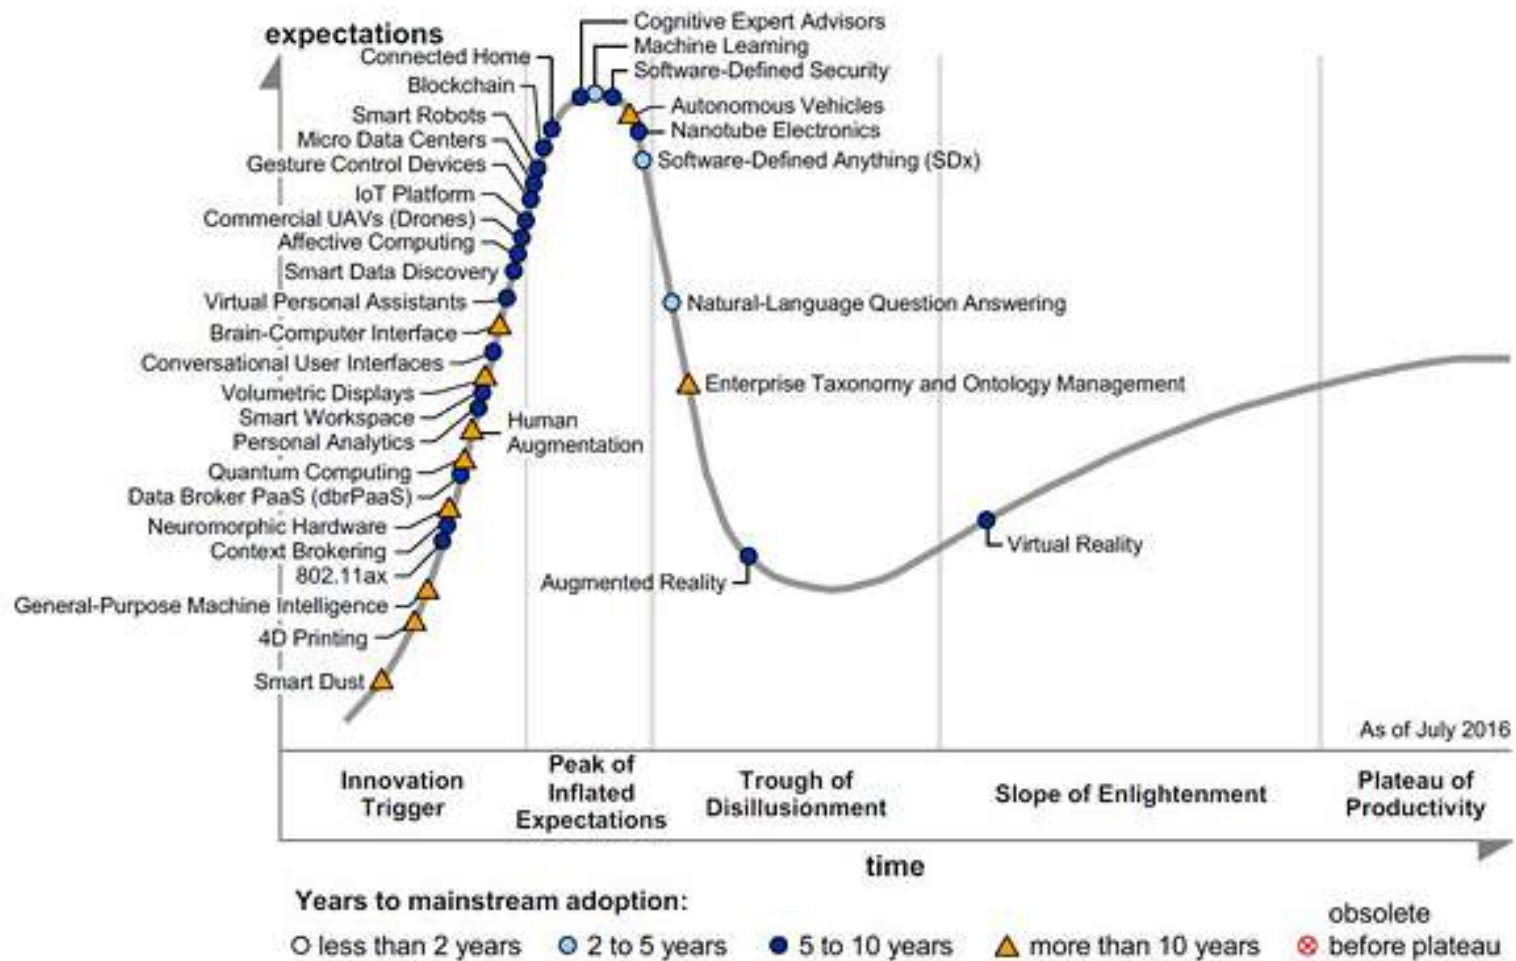

If it were easy
Everyone would do it

What are the ACTIONABLE Steps to “Keep Pace”?

- Finding the early Trends
- Assessing the Skills of tomorrow
- Sites describing “Jobs of the Future”

Early Trends Example

Gartner 2016 Hype Cycle for Emerging Technologies

Jobs of the Future

Site #1- Jobs of 2030

The screenshot displays the 'Jobs of 2030' website. At the top, there is a navigation bar with the 'cst inspired minds careers 2030' logo, links for 'Jobs of 2030', 'Articles', 'What's Changing?', and 'About', a green 'Speak to a CST Rep' button, and language options for 'EN' and 'FR'. Below the navigation bar, there are filters for 'Show all', 'Filter by trend', and 'Filter by industry'. The main content area features a grid of 12 job cards, each with a representative image, a category label, and the job title.

Category	Job Title
TECHNOLOGY	Organic Volatiles Engineer
MANUFACTURING AND CONSTRUCTION	Furniture Refurbishing Technician
MANUFACTURING AND CONSTRUCTION	Recyclable Design Specialist
PROFESSIONAL SERVICES	Marketing eMediamaker
TECHNOLOGY	Big Data Wrangler
AGRICULTURE	Agroecologist
TECHNOLOGY	Multi-Marketer
CULTURE AND RECREATION	Purchase Prediction Analyst
HEALTHCARE	Wearable Technology Therapist
TECHNOLOGY	Systems Tangilizer
AGRICULTURE	Integrated Roofing Systems Designer
TECHNOLOGY	Firefighter

Jobs of the Future

Site #1- Jobs of 2030 - Details

Wearable Technology Therapist

Healthcare

In 2030, technology continues to get smaller and access to wireless signals is present in most places the average person finds themselves on any given day, whether that be at work, home or school, the above ground or below ground, in the city or out in the country, on the move or standing still. The options for integrating technology into just about everything continue unabated (such as fashion). This has made life much easier and more enjoyable for most people in general but especially for people with disabilities.

Wearable technology will help people with visually and hearing impairments "see", "hear" and otherwise perceive their environments in a way that greatly reduces the impact of these challenges on their daily lives. It is also likely that wearable technology will bring with it some new challenges because of the way it can impact the human body. Head gear, even of the fairly lightweight variety, can slowly strain the neck over time. Similarly, technology worn on the back can cause subtle changes in posture from our unconscious tendency to lean forward to compensate for any weight placed on our backs. Also, the various forms of wave radiation associated with using wearable technology may also have subtle impacts on our body chemistry over time that will require rebalancing through dietary supplements and other forms of therapeutic intervention.

- Apparel Mechanics
- Biochemistry
- Nutrition
- Wifi Therapeutics

SOURCES OF CHANGE

As the way we live changes, so does the way we work. [Learn more about what the key](#)

Jobs of the Future

Site #1- Jobs of 2030 - Details

The options for integrating technology into just about everything continue unabated.

The Wearable Technology Therapist will do work similar to what physiotherapists and nutritionists do today but with highly specialized training in the effects of wearable technology on the human body and how to compensate for those effects. Veterinary subspecialties may also exist for therapists who work with service animals (such as canine detectives and therapy or companion animals for people with special needs) who wear technology during the performance of their duties.

Job opportunities will also exist for Wearable Technology Therapy Assistants who will assist by talking to patients and preparing them for their consultation with the Wearable Technology Therapist, working through exercises with patients, monitoring the patients' general wellness indicators and use of supplements, and keep records of patients' progress

JOB REQUIREMENTS/SKILLS

Accredited Wearable Technology Therapists will require a masters level education and a passing grade on a certification exam before being allowed to enter professional practice. Wearable Technology Therapy Assistants will complete a diploma before undertaking a certification exam.

Jobs of the Future

Site #2 – 162 Jobs that don't exist yet

Seventy-five billion is the number of devices that Morgan Stanley has calculated will be connected to the Internet of Things by 2020. That's 9.4 devices for every one of the 8 billion people that will be on earth in only seven years. IBM even created a starter kit to help people get started.

66. Locationists – People who specialize in adding the relevance of “place” to our global online communities.

67. Lifestyle Auditors

68. Efficiency Consultants

69. Ownership Network Setup Specialists – Everything people own over a certain value can be tagged, tracked, and monitored.

70. Augmented Reality Architects – Much like the paint we put on houses and the flavorings we add to food, the future will seem boring if our reality hasn't been augmented in some way.

71. Avatar Relationship Managers – As the foibles of humanity enter the realm of autonomous, freethinking avatars, people will find it necessary to both manage and limit the often-dangerous relationships avatars get themselves into.

<http://www.futuristspeaker.com/business-trends/162-future-jobs-preparing-for-jobs-that-dont-yet-exist/>

Jobs of the Future

Site #3 – Cool Future Jobs

Personal medical interpreter

With the advances made in genetic medicine, providers will increasingly be able to offer customized medicines and treatments to patients, Lebrecht says. Genetic counseling may evolve into genetic coaching. For example, futurist Madeline Ashby envisions super-specialized positions such as interpreter for a new gene-editing tool called CRISPR (clustered regularly-interspaced short palindromic repeats). Providers may evolve into individualized coaches or advocates who can inform patients about individualized medical treatments.

Want this job on the future? You'll probably need experience as a [genetic counselor](#) today.

Human-technology integration specialist

These people would teach others how to leverage and use the vast array of technologies to improve the quality of their lives, says Charles Grantham, a teacher at the Community Design Institute. This is basically an IT specialist times 10. This person could take a holistic approach that examines all the different work and consumer technologies a person uses and streamline devices and platforms to get the most out of them.

Want this job in the future? You'll probably need experience as an [IT representative](#) but you also might want to check out [life coaching](#).

Wholeness mentor

With a greater emphasis on mindfulness and "time poverty"—which Ford Motor Company's in-house futurist Sheryl Connelly defines as the fact that connectivity has actually made us feel more busy—in an increasingly chaotic world, the wholeness mentor may well be needed. This person would help others develop lifelong strategies to match their personal purposes with a hobby that provides them with fulfillment of physical needs, a social network and spiritual happiness, Grantham says.

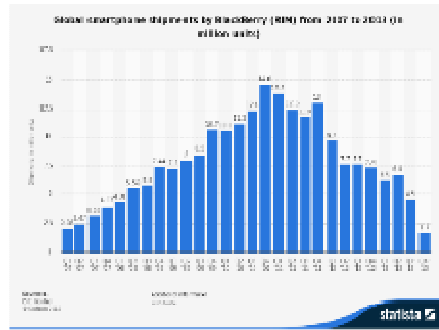

Want this job in the future? You'll probably need experience as a [life coach](#) and a [health coach](#) today.

End-of-life coach

With baby boomers approaching the end of their lives in the next 10 to 20 years, there's likely to be a greater emphasis on how people want to spend their last days, Lebrecht says. An end-of-life coach can help individuals and families make better decisions on how to spend the last weeks and months of life. "Right now, there's a lot of excessive treatment at the end of someone's life," Lebrecht says. "In the next few years, there will be a massive shift toward people wanting to add more life to their days, instead of days to their life." These coaches will help people explore their personal values and medical options so they can create the kind of end of life they want.
